Re: Sheldon G. Adelson v. Moshe Hananel
Docket No. 04cv10357RCL

Dear Attorney Zabin:

This is in response to your letter of January 18, 2006 with reference to above mentioned civil action in which you ask me to review some enclosed documents and make comment relative to Mr. Moshe Hananel's visual status.

My name is Varant Hagopian and I am a board certified ophthalmologist who has been practicing ophthalmology in Cambridge, Massachusetts for the past 45 years. I am also a Fellow of the American College of Surgeons. My Curriculum Vitae is attached and I attest to the fact that it is accurate.

I reviewed your letter and the following enclosed documents: (1) hand written letter dated January 8, 2006 from a Dr. M. Huleihel, (2) hand written letter dated (?) September 1, 2005 from Dr. I. Siev-Ner an orthopedic surgeon, (3) photograph marked as Exhibit B and captioned "Moshe Hananel as he appeared at his video deposition when he knew the court would see him," (4) Exhibit C which consisted of a typewritten letter from a Mr. Hagay Leibovitz who presented himself as a licensed private investigator working for the firm of Weizman-Ya'ar Investigations of Tel Aviv, Israel. Mr. Leibovitz submitted several still photographs and two DVDs of Mr. Moshe Hananel which were captioned "as he appeared when he did not know the court would see him" and were taken on December 19 and 25, 2005.

Let me address each document in the order that it was presented above.

(1) Hand written letter from Dr. M. Heleihel:

I can not determine what Dr. Heleihel's specialty is but from the photographs and DVDs that Mr. Leibovitz has provided it is evident that Mr. Hananel is not legally blind, does not need mobility assistance, nor is he 100% disabled. Since Mr. Hananel has diabetes it is very possible that he may have had one of the complications of that disease which is vitreous hemorrhage. Treatment for an unresolved vitreous hemorrhage would be vitrectomy accompanied by endolaser treatment and "gas exchange." If a gas exchange is performed it would be inadvisable to fly short or long distances in the immediate post operative period because of the expansion of gas under lower atmospheric pressure. Within five or six weeks post operation the gas becomes fully absorbed and flying restrictions no longer apply.

(2) Hand written letter from Dr. Siev-Ner:

Dr. Siev-Ner is an orthopedic surgeon and I would not refute his diagnosis that Mr. Hananel had ulcers of the foot which were being treated with orthopedic shoes. However, Dr. Siev-Ner's statement that Mr. Hananel is "actually blind" does not hold true in the still and motion pictures furnished by Mr. Leibovitz.

(3) Exhibit B, captioned Moshe Hananel as he appeared at his video deposition when he knew the court would see him.

This is a photograph of Mr. Hananel wearing large dark glasses and holding the handle of a metal cane.

(4) Exhibit C.

This consisted of a type written letter from the private investigator, Mr. Hagay Leibovitz and several photographs and two DVDs of Mr. Hananel. The photodocumentation was done on two different occasions one on December 19, 2005 and the other on December 25, 2005. This documentation shows Mr. Hananel doing all the following things with relative ease and unassisted by either another person or a cane.

1. walking up and down stairs,
2. reading books and documents at a bookstore,
3. picking up a friend at a hotel and escorting her to a car driven by someone else,
4. moving the end of the friend's coat out of the way before closing the car door,
5. escorting the friend across a busy street to her destination,
6. walking along a busy sidewalk,
7. crossing a street busy with vehicular traffic.

Based upon the material provided it is my opinion that it is very questionable that Mr. Hananel is so blind that it would be a hardship for him to testify and come to the United States.

Signed under the pains and penalties of perjury.

Varant Hagopian, M.D.
